

Amendments to the Specification

Please amend the paragraph bridging pages 8 and 9, as follows:

In the polymerisable host, $Q - (L -)_m - X - I_n$, the charge-transporting fragment, Q, preferably contains at least one carbazole or arylamine unit. More preferably, Q contains at least two carbazole units. Q can be based on known hole-transporting arylamine materials such as those with the formula

where Ar is an optionally substituted aromatic group, such as phenyl, or

and Ar_1 , Ar_2 , Ar_3 and Ar_4 are optionally substituted aromatic or heteroaromatic groups. Ar is preferably biphenyl. At least two of Ar_1 , Ar_2 , Ar_3 and Ar_4 are bonded to a cross-linkable group, X. Ar_1 and Ar_2 , and/or Ar_3 and Ar_4 are optionally linked to form a N containing ring, for example so that the N forms part of a carbazole [[u]] unit eg.
